

Further Developments

Reason for change	SWLSE2-4307, 8D-12379, SA 79158 The duration of the CSS animation (CSS Animation Duration) should be configurable.
Type of change	Request was implemented accordingly.
Affected area	LASAL VISUDesignerRuntime

Reason for the change	SWLSE2-4268, 8D-12021 It should be possible to log value changes of the data points in the LASAL Class2 project in the journal components via the DSComm method "EventjournalAdd".
Type of change	Request was implemented accordingly. Two new journal entry types were implemented for this purpose (described in the DSComm help from version 3.11): - Journal Entry with Id 65520 represents the old and the new value of a string data point. - Journal Entry with Id 65521 represents the old and the new value of a numeric data point.
Affected area	LASAL VISURuntime

Reason for the change	SWLSE2-4269, 8D-12131 A possibility is desired to convert the Sigmatek Date/Time format into a Unix timestamp.
Type of change	The API has been extended with the following functions for converting date and time values: - sigApi.sigUtils.sigdateTimeToUnix - sigApi.sigUtils.unixToSigDateTime
Affected area	LASAL VISURuntime

Error Corrections

Reason for the change	SWLSE2-4241, 8D-12002, SA 77098 The event journal and the alarm list are to be revised in order to avoid unnecessary calls of the following events and thus increased load when processing the controls and the associated flickering: - EVENTJOURNAL_MGR_STATE_CHG - TEMP_ALARM_MGR_ALARM_STATE_CHG
Risk assessment	No risk.
Type of change	The error has been fixed.
Affected area	LASAL VISURuntime

Reason for the change	SWLSE2-4347, 8D-12640 If a project contains a large number of static checkbits, which in turn contain data points, the requests are sent individually to the LASAL DataService, which can lead to increased system utilization.
Risk assessment	No risk.
Type of change	The requests in question are now sent collectively to the LASAL DataService.
Affected area	LASAL VISURuntime
